## ABSTRACT

It is shown that the collection of all  $\binom{12}{5}$  quintuples chosen from a set of twelve points can be partitioned into twelve mutually disjoint 4-(11, 5, 1) designs in precisely 24 non-isomorphic ways. The results obtained are then used to show that the collection of all  $\binom{13}{6}$  hexuples chosen from a set of thirteen points cannot be partitioned into thirteen mutually disjoint 5-(12, 6, 1) designs.

### 1. Introduction.

A  $t$ -design based on a  $v$ -set,  $X$ , is a collection of  $k$ -subsets (blocks) chosen from  $X$  in such a way that each unordered  $t$ -subset of  $X$  occurs in precisely  $\lambda$  of the blocks. Such a design has parameters  $t$ -( $v, k, \lambda$ ). Two such designs are said to be *disjoint* if and only if they have no block in common.

If the set of all the  $\binom{v}{k}$   $k$ -sets chosen from  $X$  can be partitioned into mutually disjoint  $t$ -( $v, k, \lambda$ ) designs, then these designs are said to form a *large set*. Whether or not a large set exists, it may be possible to pack the designs neatly by enlarging the set of points on which they are based, sometimes by adjoining just one extra point. Thus, if the set of all the  $\binom{v}{k}$   $k$ -sets chosen from  $X$  can be partitioned into  $v$  mutually disjoint  $t$ -( $v - 1, k, \lambda$ ) designs, each missing a different point of  $X$ , then these designs are said to form an *overlarge set*. In this paper, we shall take  $X = \{0, 1, \dots, 9, A, B\}$ , and label the designs of an overlarge set by their missing elements. Thus the designs in any overlarge set of 4-(11, 5, 1) designs are labelled  $D_i$ , for  $i = 0, 1, \dots, 9, A, B$ .

There are two general constructions for overlarge sets, as follows.

- (i) From any  $t$ -( $v, k, 1$ ) design,  $D$ , we can form an overlarge set of  $(t - 1)$ -( $v - 1, k - 1, 1$ ) designs by choosing, for each  $i = 1, \dots, v$ , all the blocks of  $D$  containing  $i$ , and deleting  $i$  from each of them. These  $(k - 1)$ -sets form design  $D_i$ , and this overlarge set is said to be *derived* from  $D$ . In

general the designs  $D_i$  derived from  $D$  need not be isomorphic to each other.

- (ii) From any overlarge set of  $t$ -( $v, k, 1$ ) designs  $D_0, D_1, \dots, D_v$  based on the set  $\{0, 1, \dots, v\}$ , we can form in the following way  $v + 1$  distinct overlarge sets of  $(t - 1)$ -( $v - 1, k - 1, 1$ ) designs. Starting from some fixed element  $i$ , we first discard the design  $D_i$  and then, from each design  $D_j, j \neq i$ , we choose all the blocks containing  $i$ , and delete  $i$  from each of them to form the design  $E_j$  on the set  $\{0, 1, \dots, v\} \setminus \{i, j\}$ . The designs  $E_j, j \neq i$ , form an overlarge set of  $(t - 1)$ -( $v - 1, k - 1, 1$ ) designs based on the set  $\{0, 1, \dots, v\} \setminus \{i\}$ ; this is a contraction of the original overlarge set. The isomorphism class of the contraction will in general depend on the element  $i$  which has been deleted. We also refer to the original overlarge set of designs  $D_i, i = 0, 1, \dots, v$ , as an extension of the overlarge set of designs  $E_j$ . Note that, for  $t \geq 2$ , every overlarge set of  $t$ -designs is an extension of at least one overlarge set of  $(t - 1)$ -designs, but not every overlarge set of  $(t - 1)$ -designs is a contraction of an overlarge set of  $t$ -designs; see Table 3.

This paper concludes a series of papers [3,4] which establish a catalogue of overlarge sets of the 2-(9, 3, 1) design and its extensions. The reader is referred to [4] for the details of the construction of the 4-(11, 5, 1) and the 5-(12, 6, 1) designs from the 3-(10, 4, 1) design.

## 2. The overlarge sets of 4-(11, 5, 1) designs.

The set of all  $\binom{12}{5}$  quintuples chosen from a 12-set can be partitioned into an overlarge set of 4-(11, 5, 1) designs in precisely 24 non-isomorphic ways. These are given in Table 1, in the form of the  $3 \times 3$  arrays from which they can be constructed using the extensions,  $\alpha_x \beta_y$ , shown, and in the form of the blocks of each design. The reader is referred to [4] for details on how to use the  $3 \times 3$  arrays and pairs of extensions to obtain the 4-(11, 5, 1) designs listed. The first extension listed,  $\alpha_x$ , is used to obtain a 3-(10, 4, 1) design and the second,  $\beta_y$ , uses this 3-(10, 4, 1) design and the  $3 \times 3$  array to obtain a 4-(11, 5, 1) design.

Table 2 lists the automorphism groups of the overlarge sets. Table 3 shows the isomorphism classes of the smaller overlarge sets which arise from the contraction on each element in turn as described in [4]; see also the discussion in [5].

There does not exist an overlarge set of 5-(12, 6, 1) designs. Each 4-(11, 5, 1) design,  $D_i$ , can be extended to a 5-(12, 6, 1) design by adjoining the point  $C$  to each of its 66 blocks, and then taking as the 66 additional blocks the complements, with respect to the set  $\{0, \dots, 9, A, B\} \setminus \{i\}$ , of each of the existing blocks. To show that there does not exist an overlarge set of 5-(12, 6, 1) designs it is sufficient to find a pair of blocks in each overlarge set of 4-(11, 5, 1) designs which result in the same block in their associated 5-(12, 6, 1) designs. For overlarge sets 1 through 12 of the 4-(11, 5, 1) designs,  $D_0$  contains the block 12349 and  $D_1$  contains the block 02349, both of which have as their complement the block 5678AB. Similarly, in

overlarge sets 13, 14, 22 and 23, 12349 in  $D_0$  and 01249 in  $D_3$  both give 5678AB ; in overlarge sets 15 through 19, 12349 in  $D_0$  and 01239 in  $D_4$  both give 5678AB ; in overlarge set 20, 12349 in  $D_0$  and 01234 in  $D_9$  both give 5678AB ; in overlarge set 21, 0235A in  $D_1$  and 01235 in  $D_A$  both give 46789B ; and, in overlarge set 24, 12345 in  $D_0$  and 01235 in  $D_4$  both give 6789AB.

### 3. Computation.

For each of the 21 non-isomorphic overlarge sets of 3-(10,4,1) designs previously listed in [4], we calculated each of the available extensions of the underlying 2-(9,3,1) designs. For example, if the  $\mu$  extension had been used to obtain the 3-(10,4,1) design  $D_i$  then the  $\nu$  and  $\xi$  extensions were used to extend it to a 4-(11,5,1) design in two different ways; see [4]. By using a backtrack search and considering each extension of the design  $D_i$  only after successfully extending  $D_0, D_1, \dots, D_{i-1}$  to a partial overlarge set of 4-(11,5,1) designs, we obtained overlarge sets of 4-(11,5,1) designs. Isomorphism checking gave precisely 24 non-isomorphic overlarge sets.

Each extension leads to 11 mutually disjoint 4-(11,5,1) designs, each missing one of the elements of the original set  $\{0, 1, \dots, 9, A\}$ , and all containing the element  $B$ . A straightforward counting argument shows that the 66 remaining quintuples form a 4-(11,5,1) design on the original set. This computation was cross-checked group-theoretically as given in [4].

The software package *nauty* [2] and Cayley [1] were used in the computation, which was carried out on the Pyramid 9810 in the Department of Mathematics at The University of Queensland.
